## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21- 41, drawn to a transcriptional assay with a reporter gene and a receptor protein to determine whether a compound is an inverse agonist, classified in class 435, subclass 6.
- II. Claims 42 and 43, drawn to a compound that is an inverse agonist, classification not determinable because compound is unknown.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the product of invention II can be determined by a different assay, a binding assay, for example. Also, claim 42 depends on canceled claims and RAR receptor is not listed as a species of invention I in claim 43.

This application contains claims directed to the following patentably distinct species of the claimed invention:

If invention I is elected then applicant must elect from one of the receptors named in claims 22 and 24- 41.

Then Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 21 and 23- 25 generic.

If Applicant elects invention II, then one of the listed species of claim 43 must be chosen.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
